

## TECHNICAL DATA SHEET

### SHORT DESCRIPTION:

ELT Wow Additive was designed to be used with the ELT Series. Wow stands for wet-on-wet printing. This additive will allow the ELT Series inks to sink in or “wick” into the fabric. By wicking into the fabric, it is less likely to build up on the back of your screen when printing wet-on-wet. This is only recommended for cotton and cotton blends.

### ELT WOW ADDITIVE BENEFITS:

- Improves wet-on-wet screen printing experience.
- Speeds up production and prevents the need to flash cure as often.
- Can be mixed in by hand, drill, or machine.
- Works with ELT Series or ELT-S Series.

### MIXING INSTRUCTIONS:

- Add 1-2% ELT Wow Additive by weight.
- Never exceed 5% as this may ruin the ink.
- Results will vary as some colors are stickier than others.
- Not recommended for use in white ink.

**Important Note:** ELT Wow Additive is not a curable product. If you add too much ELT Wow Additive, you may experience durability problems as the ink will not properly cure.

Always perform a pretest print and test cure conditions on the fabric to be printed to establish the best results. Stir inks vigorously before each use. Viscosity may need adjusting for best results. If there is ever a question about a print job, call us at 800-942-4447. We are always happy to help!
