

d•Haze® Gel Ghost Remover

Environmentally Friendly • 100% Biodegradable • Non-Toxic and Non-Caustic

Same great formulation as Franmar's d•Haze®, only gelled for greater control of the ghost remover, allowing the focus completely on the affected area. A non-caustic, non-toxic product that will not damage the mesh even after *years* of use, and no need to wear protective gear. d•Haze® Gel can also be used to remove locked-in emulsion.

To Use:

- 1. On a dry or slightly damp screen, apply d•Haze® Gel on the ghose/haze image to be cleaned.**
- 2. Work in on both sides of the screen with scrub brush or Franmar's Red Biggee pad.** *For tough to clean haze images, let sit for up to 2 minutes before cleaning.*
- 3. Spray clean with water or use a damp cloth to wipe off both sides of screen.**

- ✓ **Tip #1** Use each time immediately after stencil removal so ghost/haze will not set in the screen.
- ✓ **Tip #2** Great for removal of locked-in emulsion.
- ✓ **Tip #3** Use Franmar's d•Grease™ to remove any residue.
- ✓ **Tip #4** 1 hour or longer may be necessary for older images, and will not weaken or damage mesh.
